The name, identification and number of lots (contracts) of this RFB procurement are specified in the BDS.
- 1.2 Throughout this bidding document:
 - (a) the term "in writing" means communicated in written form (e.g. by mail, e-mail, fax, including if specified **in the BDS**, distributed or received through the electronic-procurement system used by the Employer) with proof of receipt;
 - (b) if the context so requires, "singular" means "plural" and vice versa; and
 - (c) "Day" means calendar day, unless otherwise specified as "Business Day". A Business Day is any day that is an official working day of the Borrower. It excludes the Borrower's official public holidays.

1.3 The successful Bidder will be expected to complete the performance of the Services by the Intended Completion Date provided **in the BDS**.

2. Source of Funds

- 2.1 The Borrower or Recipient (hereinafter called "Borrower") specified **in the BDS** has applied for or received financing (hereinafter called "funds") from the International Bank for Reconstruction and Development or the International Development Association (hereinafter called "the Bank") in an amount specified **in the BDS**, toward the project named **in the BDS**. The Borrower intends to apply a portion of the funds to eligible payments under the contract for which this bidding document is issued.
- 2.2 Payment by the Bank will be made only at the request of the Borrower and upon approval by the Bank in accordance with the terms and conditions of the Loan (or other financing) Agreement. The Loan (or other financing) Agreement prohibits a withdrawal from the loan account for the purpose of any payment to persons or entities, or for any import of goods, equipment or materials if such payment or import is prohibited by a decision of the United Nations Security Council taken under Chapter VII of the Charter of the United Nations. No party other than the Borrower shall derive any rights

from the Loan (or other financing) Agreement or have any claim to the proceeds of the Loan (or other financing).

3. Fraud and Corruption

- 3.1 The Bank requires compliance with the Bank's Anti-Corruption Guidelines and its prevailing sanctions policies and procedures as set forth in the WBG's Sanctions Framework, as set forth in Section VI.
- 3.2 In further pursuance of this policy, Bidders shall permit and shall cause their agents (where declared or not), subcontractors, subconsultants, service providers, suppliers, and their personnel, to permit the Bank to inspect all accounts, records and other documents relating to any initial selection process, prequalification process, bid submission, proposal submission and contract performance (in the case of award), and to have them audited by auditors appointed by the Bank.

4. Eligible Bidders

- 4.1 A Bidder may be a firm that is a private entity, a state-owned entity or institution subject to ITB 4.6, or any combination of such entities in the form of a Joint Venture (JV) under an existing agreement or with the intent to enter into such an agreement supported by a letter of intent. In the case of a joint venture, all members shall be jointly and severally liable for the execution of the entire Contract in accordance with the Contract terms. The JV shall nominate a Representative who shall have the authority to conduct all business for and on behalf of any and all the members of the JV during the Bidding process and, in the event the JV is awarded the Contract, during contract execution. Unless specified in the BDS, there is no limit on the number of members in a JV.

 - (b) receives or has received any direct or indirect subsidy from another Bidder; or

28. Clarification of Bids

The Employer's request for clarification and the response shall be in writing. No change, including any voluntary increase or decrease, in the prices or substance of the Bid shall be sought, offered, or permitted, except to confirm the correction of arithmetic errors discovered by the Employer in the evaluation of the Bids, in accordance with ITB 32.

30. Determination of Responsiveness

30.1 The Employer's determination of a Bid's responsiveness is to be based on the contents of the Bid itself, as defined in ITB 12.

30.2 A substantially responsive Bid is one that meets the requirements of the bidding document without material deviation, reservation, or omission. A material deviation, reservation, or omission is one that:

- (a) if accepted, would:

- 30.4 If a Bid is not substantially responsive to the requirements of bidding document, it shall be rejected by the Employer and may not subsequently be made responsive by correction of the material deviation, reservation, or omission.
- 31. Nonconformities, Errors and Omissions**
 - 31.1 Provided that a Bid is substantially responsive, the Employer may waive any nonconformities in the Bid.
 - 31.2 Provided that a Bid is substantially responsive, the Employer may request that the Bidder submit the necessary information or documentation, within a reasonable period of time, to rectify nonmaterial nonconformities or omissions in the Bid related to documentation requirements. Requesting information or documentation on such nonconformities shall not be related to any aspect of the price of the Bid. Failure of the Bidder to comply with the request may result in the rejection of its Bid.
 - 31.3 Provided that a Bid is substantially responsive, the Employer shall rectify quantifiable nonmaterial nonconformities related to the Bid Price. To this effect, the Bid Price shall be adjusted, for comparison purposes only, to reflect the price of a missing or non-conforming item or component in the manner specified **in the BDS**.
- 32. Correction of Arithmetical Errors**
 - 32.1 Provided that the Bid is substantially responsive, the Employer shall correct arithmetical errors on the following basis:
 - (a) if there is a discrepancy between the unit price and the line item total that is obtained by multiplying the unit price by the quantity, the unit price shall prevail and the line item total shall be corrected, unless in the opinion of the Employer there is an obvious misplacement of the decimal point in the unit price, in

- which case the line item total as quoted shall govern and the unit price shall be corrected;
- (b) if there is an error in a total corresponding to the addition or subtraction of subtotals, the subtotals shall prevail and the total shall be corrected; and
 - (c) if there is a discrepancy between words and figures, the amount in words shall prevail, unless the amount expressed in words is related to an arithmetic error, in which case the amount in figures shall prevail subject to (a) and (b) above.
- 32.2 Bidders shall be requested to accept correction of arithmetical errors. Failure to accept the correction in accordance with ITB 32.1, shall result in the rejection of the Bid.
- 33. Conversion to Single Currency**
- 33.1 For evaluation and comparison purposes, the currency(ies) of the Bid shall be converted in a single currency as specified **in the BDS**.
- 34. Margin of Preference**

- 35. Evaluation of Bids**
- 35.1 The Employer shall use the criteria and methodologies listed in this ITB and Section III, Evaluation and Qualification Criteria. No other evaluation criteria or methodologies shall be permitted. By applying the criteria and methodologies, the Employer shall determine the Most Advantageous Bid. This is the Bid of the Bidder that meets the qualification criteria and whose Bid has been determined to be:
- (a) substantially responsive to the bidding document; and
 - (b) the lowest evaluated cost.
- 35.2 In evaluating the Bids, the Employer will determine for each Bid the evaluated Bid cost by adjusting the Bid price as follows:
- (a) price adjustment for correction of arithmetic errors in accordance with ITB 32.1;
 - (b) price adjustment due to discounts offered in accordance with ITB 15.4;
 - (c) converting the amount resulting from applying (a) and (b) above, if relevant, to a single currency in accordance with ITB 33;
 - (d) price adjustment due to quantifiable nonmaterial nonconformities in accordance with ITB 31.3;

- (e) excluding provisional sums and the provision, if any, for contingencies in the Activity Schedule but including Daywork, when requested in the Specifications (or Terms of Reference); and
 - (f) the additional evaluation factors are specified in Section III, Evaluation and Qualification Criteria.
- 35.3 The estimated effect of the price adjustment provisions of the Conditions of Contract, applied over the period of execution of the Contract, shall not be taken into account in Bid evaluation.
- 35.4 If this bidding document allows Bidders to quote separate prices for different lots (contracts), the methodology to determine the lowest evaluated cost of the lot (contract) combinations, including any discounts offered in the Letter of Bid, is specified in Section III, Evaluation and Qualification Criteria.
- 36. Comparison of Bids**
- 36.1 The Employer shall compare the evaluated costs of all substantially responsive Bids established in accordance with ITB 35.2 to determine the Bid that has the lowest evaluated cost.
- 37. Abnormally Low Bids**
- 37.1 An Abnormally Low Bid is one where the Bid price, in combination with other constituent elements of the Bid, appears unreasonably low to the extent that the Bid price raises material concerns as to the capability of the Bidder to perform the Contract for the offered Bid price.
- 37.2 In the event of identification of a potentially Abnormally Low Bid, the Employer shall seek written clarifications from the Bidder, including detailed price analyses of its Bid price in relation to the subject matter of the contract, scope, proposed methodology, schedule, allocation of risks and responsibilities and any other requirements of the bidding document.
- 37.3 After evaluation of the price analyses, in the event that the Employer determines that the Bidder has failed to demonstrate its capability to perform the Contract for the offered Bid Price, the Employer shall reject the Bid.
- 38. Qualification of the Bidder**
- 38.1 The Employer shall determine to its satisfaction whether the Bidder that is selected as having submitted the lowest evaluated cost and substantially responsive Bid is eligible and meets the qualifying criteria specified in Section III, Evaluation and Qualification Criteria.
- 38.2 The determination shall be based upon an examination of the documentary evidence of the Bidder's qualifications submitted by the Bidder, pursuant to ITB 18. The determination shall not take into consideration the qualifications of other firms such as the Bidder's

subsidiaries, parent entities, affiliates, subcontractors or any other firm(s) different from the Bidder that submitted the Bid.

- 38.3 An affirmative determination shall be a prerequisite for award of the Contract to the Bidder. A negative determination shall result in disqualification of the Bid, in which event the Employer shall proceed to the Bidder who offers a substantially responsive Bid with the next lowest evaluated cost to make a similar determination of that Bidder's qualifications to perform satisfactorily.
- 39. Employer's Right to Accept Any Bid, and to Reject Any or All Bids**
- 39.1 The Employer reserves the right to accept or reject any Bid, and to annul the Bidding process and reject all Bids at any time prior to Contract Award, without thereby incurring any liability to Bidders. Part II – Employer’s Requirement

Section VII - Activity Schedule

1. PROJECT BACKGROUND AND OBJECTIVES

- 1.1. The West African Power Pool (WAPP) is a specialized institution of ECOWAS created in December 1999 by Decision A/DEC.5/12/99 and implemented in January 2006 by Decisions A/DEC.18/01/06 and A/DEC.20/01/06 of the Conference of ECOWAS Heads of States.
- 1.2. The strategic objective of ECOWAS, implemented by the WAPP, relies on a dynamic vision of the integration and operation of the national electricity networks operating in an integrated regional electricity market enabling a stable, reliable and affordable electricity supply to the ECOWAS populations in the medium and long term. To implement this vision, the WAPP promotes and develops power transmission and generation infrastructures, and would eventually ensure, with the operationalization of the power market, the coordination of power exchanges between the ECOWAS Member States.
- 1.3. The current WAPP infrastructure development plan is based on the ECOWAS Regional Production and Transport Development Master Plan 2019-2033, adopted by the ECOWAS Heads of State in December 2018, through the additional Act A/SA.4/12/18, that identifies key priority projects, which implementation is mandatory for the stable integration of the national electricity networks in ECOWAS, and to enable optimal power exchanges and trade between Member States. Seventy-five (75) priority projects were approved, for an estimated total investment of USD 36,29 Bn, involving the construction of approximately 23,000 km of transport power lines, and the operation of a total production capacity estimated to 15,49 GW, of which 3,15 GW from variable renewable energy sources (solar and wind).
- 1.4. To support the Plan's implementation, the World Bank finances the technical assistance project ("Solar Development in Sub-Saharan Africa, Project #1 Technical Assistance to WAPP" (P162580) ") to the WAPP General Secretariat for the preparation of regional solar power projects, as well as technical studies supporting improved renewable energy integration.
- 1.5. SOP #1 Component 2.b. foresees to roll out a solar resource ground measurement campaign in multiple locations across the region to improve overall knowledge of the solar resource and siting of solar plants, and to reduce uncertainties on the solar resource, which is the purpose of these Terms of Reference (ToR).
- 1.6. The ToR outline an assignment for a solar resource ground measurement campaign in 33 to 35 locations across the Region for which 28 to 30 stations will be provided. These stations will be supplemented by three (3) measurement stations in Mali and two (2) measurement stations in Burkina to be installed as part of the separate feasibility study of regional solar power plants. These five (5) will be delivered to the Service Provider at the Effective Date of the Contract relating of this assignment. This activity will be performed

in coordination with solar energy-related activities of the West Africa Clean Energy Corridor Initiative, in partnership with the ECOWAS Center for Renewable Energy and Energy Efficiency (ECREEE), and the ECOWAS Regional Electricity Regulatory Authority (ERERA).

1.7. The solar measurement campaign has three main objectives:

- To improve overall knowledge of the solar resource and siting of solar plants, and to reduce uncertainties on the solar resource (and thus lower solar PPA prices);
- To achieve building the capacity in measurement campaigns by countries, WAPP member utilities, institutions in charge of solar energy in the countries, and so on;
- To increase the awareness of solar resource potential, and solar power, within WAPP, ECOWAS mainland member countries and utilities, and build capacity in the operation and maintenance of solar measurement equipment.

2. SERVICE PROVIDER QUALIFICATIONS

It is anticipated that Service Providers responding to this Request for Proposals will be firms, or consortia of firms. Service Providers are invited to submit an offer for this Request for Proposals, which shall include, as a complement to the standard qualification element requested by the Standard Requirements for Procurement Manual, the following specific elements:

- 2.1. Outline of the Service Provider's core business and experience in carrying out solar measurement campaigns and related meteorological measurements (e.g. temperature, humidity, atmospheric pressure, wind speed and direction, and specialized measurements such as aerosol optical depth and soiling); including detailed references of the projects delivered – client name, installation year, contact, price;
- 2.2. Detailed description of their methodological approach to site scoping and selection, logistical arrangements, maintenance, and calibration practices in line with the proposed Scope of Work;
- 2.3. Demonstrated capacity to work both in English and French;
- 2.4. General work experience in the West African countries;
- 2.5. Details of key members of the Service Provider's team and their experience with solar measurements campaigns;
- 2.6. Details on any restriction on the Service Provider's ability to work in certain regions or categories of country, including any restrictions (security or otherwise) on the Service Provider's ability to operate in West African countries;
- 2.7. Any comments that the Service Provider has on the approach being proposed or methodological considerations that the WAPP should take into account during the project implementation.

3. SCOPE OF WORK

- 3.1. This assignment covers the planning and the implementation of a high-quality solar measurement campaign at 33 to 35 sites, in the 14 countries of continental ECOWAS, including monthly delivery of bankable¹ solar data over a two-year period for each site.
- 3.2. The Service Provider shall carry out the solar measurement campaign in line with the technical specifications outlined in **Annex A**. The default solar measurement equipment shall conform to Tier 1 of the standards developed by Energy Sector Management Assistance Program (ESMAP), but with the option of using Tier 2 equipment where site conditions dictate.
- 3.3. The Service Provider shall be responsible for identifying and proposing suitable sites for hosting the solar measurement equipment:
 - As a baseline, 2 measurement sites in Burkina Faso, and 3 measurement sites in Mali, conforming with ESMAP’s technical specifications, will be equipped through a separate agreement and handed over to the Service Provider at the Effective Date of the Contract, including 6 to 7 months of measurement data.
 - The site selection for the additional 28 to 30 additional measurement stations shall be based on a geospatial analysis of the solar resource and its technical potential performed by ECREEE and IRENA. Geospatial analysis shall consider the ease of connection to the countries grids and their evolutions proposed by the WAPP masterplan.
 - Based on this geospatial analysis, the sites shall be identified by the Service Provider in partnership with the WAPP and its members, with particular attention paid to the inputs of the utilities in each target country.
 - One site minimum shall be awarded per country.
 - Existing equipment matching the standards developed by ESMAP, which data can be included to the data pool, shall be considered in the sharing of the 28-30 stations to avoid unnecessary redundancies.
- 3.4. The Service Provider will also be responsible for the operation and maintenance of the 2 measurement sites in Burkina Faso and the 3 measurement sites in Mali that compliant with the ESMAP technical specifications that will be delivered at a date to be agreed with WAPP’s Partner .
- 3.5. For the Sahel countries, where conditions of solar irradiation and other environmental conditions would be favorable for CSP plants, the Service Provider shall recommend Tier 1 stations, and propose a special action for dust monitoring.
- 3.6. The Service Provider shall provide two training sessions (English and French) of four days each and capacity reinforcement regarding the operation and maintenance of the equipment, analysis and data processing, and data quality analysis, for the WAPP staff, local partners, staff of electricity utilities and other stakeholders (e.g. research centers, rural electrification agencies). These training sessions will be held in one of the ECOWAS Member States, to be defined by the WAPP.

¹ Bankable in this context means that the delivered data and associated reporting shall be of sufficient quality as to be accepted by international, private financial institutions for the purposes of project feasibility and due diligence.

3.7. The Service Provider shall be responsible for:

- Visiting the proposed site locations and selecting the optimal location for the measurement equipment;
- Providing high quality measuring equipment for each site for the duration of the project, in line with the technical specifications;
- Arranging for site permitting and access;
- Providing two years of high quality, ‘bankable’ meteorological data relevant for solar resource assessment and project development;
- Deliver the data as specified in 3.11;
- Ensuring maintenance, security, local cleaning/caretaking, and mitigation against extreme weather events and corrosion;
- Ensuring strong local involvement and capacity building at all stages of the measurement campaign;
- Decommissioning at all sites at the end of the measurement campaign, unless separate arrangements are made with one or more host institutions to continue with measurements outside of this assignment/contract. The conditions for handing over the installations should be indicated in the technical offer, if relevant.

3.8. The Service Provider Vendor shall, as their first task, attend a WAPP meeting (“kickoff meeting”) to introduce the methodological framework, initiate consultations on the proposed solar measurement campaign, and in parallel engage with the primary counterpart agencies in each country (most likely the utility company and/or energy ministry) to advance the site selection process.

3.9. Once the Implementation Plan is agreed and validated on the occasion of a workshop organized by the WAPP Secretariat, the Service Provider shall implement the solar measurement equipment installation in close coordination with the WAPP and counterparts.

3.10. The Service Provider shall prepare a Site Installation Report immediately following commissioning of each site, outlining the site location, site characteristics, technical specifications, calibration procedures, and all other relevant information to allow data users to fully understand the site and ensure the bankability of the measured data. The Site Installation Report shall be accompanied by photographs of the site and the surrounding terrain, both within the report and delivered separately. An equipment reception / measurement operation kickoff certificate shall be established with the representative designated by the WAPP.

3.11. Data collection and transmission:

- a) The Service Provider transfers daily each site’s measurements to their data storage system, and shall transfer monthly the data to the ESMAP data bank, in both raw and quality-controlled format;
- b) For the pool of data collected for this project, the WAPP, as well as key actors identified by WAPP, and the World Bank, shall be granted access to

the Vendor's storage system (or their monitoring platform), for real time analysis needs. This service shall be maintained for five years after the closing of the project;

- c) Each month, the collected data are delivered to the WAPP on physical electronic device (USB, hard disk or equivalent), including a conversion software to standard formats (e.g. to csv) if required.

3.12. The Service Provider shall deliver a Site Measurement Report after the first year of data collection, and again following the second year of data collection. This shall analyze the local site climatology, and detail any issues with the site or equipment, field calibration procedure, and any notable conclusions or results.

3.13. The assignment shall be deemed completed once two years of continuous data is delivered in compliance with the minimum data recovery rates specified. At this point the Service Provider shall decommission each site and remove the solar measurement equipment, unless alternative arrangements outside the scope of this assignment/contract are made and endorsed by WAPP.

- 5.1. Facilitation of contacts with relevant stakeholders in host countries, including invitation to WAPP meeting(s) as required;
- 5.2. Access to the ESMAP hosting sites (3.11.a);
- 5.3. Long-term archiving of the measurement data received on electronic support (3.11.c.);
- 5.4. Assistance in the process of obtaining temporary admission, duties and tax relief on the hardware.

6. SPECIAL CONDITIONS

- 6.1. All the attached Annexes shall apply in full.
- 6.2. The Service Provider shall conduct all correspondence English, and all deliverables shall be presented both in French and English.
- 6.3. All deliverables shall be presented to the WAPP in electronic format suitable for online

publication unless otherwise specified.

- 6.4. The contract type shall be a fully inclusive, lump sum contract (no reimbursable expenses), issued in US Dollars.
- 6.5. All taxes, duties and permitting fees are the responsibility of the Service Provider. The equipment deployed shall be owned by the Service Provider and may be new or refurbished so long as it fulfills the technical criteria and standards outlined. The equipment is therefore being ‘rented’ to this assignment for the duration of the contract for the purposes of data provision and remains the full responsibility of the Service Provider. This includes liability for theft, damage or natural hazard, and any related insurance costs or claims.
- 6.6. For any travel, the Service Provider shall be responsible for their own in-country logistics (including getting to/from meetings and site visit locations). All travel expenses shall be included in the lump sum contract (no receipts required).
- 6.7. The Service Provider should ensure the continuous power supply of all Tier 1 and Tier 2 stations, grid connected or off-grid, including options to protect against regular blackouts. Any additional costs relating to provision of off-grid power to Tier 1 stations shall be included in the price of the Offer.
- 6.8. It is strongly recommended that any local partner(s) proposed should have a track record of working in West Africa, and excellent logistical capabilities. Staff personnel and local partners do not have to correspond to those listed in the Service Provider’s Proposal response, and Service Providers may propose local partners that are also collaborating with other invited Service Providers to this RFP.
- 6.9. Service Providers should note that no contract modification is envisaged, and that all offers should be considered final and binding on the Service Provider for full delivery of the project. Any modifications after award of contract could be expected to reduce the total contract value, for example if Tier 2 stations are deployed in place of Tier 1 stations.
- 6.10. Each Service Provider must include a set contingency fund of USD\$50,000 in their Financial Proposal. This shall only be used to cover additional items agreed between the Service Provider and the WAPP, or force majeure costs outside of the Service Provider’s control. It shall not cover cost differences relating to currency changes, taxes, import duties, permitting, and suchlike, which are the responsibility of the Service Provider.
- 6.11. Service Providers should allow sufficient budget for extensive travel and engagement within the region, especially in the planning phase of the project. The Service Provider’s proposed plan for the WAPP and host agency engagement for the selection of sites and coordination related to station installation shall be one of the evaluation criteria.
- 6.12. Each Service Provider’s core offer shall be based on a minimum of 25 Tier 1 stations and 3 Tier 2 stations, to facilitate a fair comparison of offers and elicit unit costs for each station type. Deviations to this requirement at proposal stage should be documented. The WAPP may elect to increase the number of sites or modify the proportion of Tier 1 and Tier 2 stations, using the unit cost of each station as quoted by the winning Service Provider, resorting to the contingency fund for any cost increases if necessary. Any cost decrease may lead to a reduction in the winning Service Provider’s quoted bid or a contract modification if made after the issuance of the contract.

- 6.13. Each Service Provider’s core offer must include the ‘Additional Equipment’ outlined in Annex A for all sites to be equipped.
- 6.14. The Technical Proposal must include a summary of all personnel proposed for the assignment, and the level of effort for each individual in terms of person-days. A detailed breakdown of personnel costs is not required in the Financial Proposal.

ANNEX A: SOLAR MEASUREMENT PROCEDURES AND SPECIFICATIONS

The Service Provider may propose an alternative set of standards and/or methodology in place of these requirements, but they should provide an equivalent or better performance and reliability. Should site conditions warrant this, the Service Provider may also propose additional instrumentation as optional items.

EQUIPMENT SPECIFICATIONS

Tier 1

Tier 1 stations are the preferred choice for the purpose of validating the solar resource modeling and the provision of long-term reference data, where they are a practical option. They provide the highest accuracy measurements and use thermopile radiometers to measure all three components (GHI, DNI, and DHI). The sensors chosen for the GHI and DHI measurements must meet ISO Secondary Standards; the sensors chosen for the DNI measurements must meet at least ISO First Class in force (ISO 9060:2018 and IEC 61724-1:2017, with recommended use of Class A (high accuracy) devices.

Therefore, the following descriptions are an indicative basis of criteria, which should be satisfied as a minimum. In case of conflict with the above-referenced norms, the most stringent specifications shall prevail.

A Tier 1 station consists of a pyrheliometer mounted on an automatic tracker for the DNI measurements and a tracker with a shading ball shading a pyranometer from the direct beam for the diffuse measurements. Such a station provides the highest accuracy measurements, although a Tier 1 station requires (ideally) daily maintenance to ensure that the domes of the pyranometers and pyrheliometers are properly cleaned and the instruments are properly leveled. A Tier 1 station also includes a weather station with temperature, humidity, barometric pressure sensors at 1 to 2m above ground level², and wind speed and direction data at a height of 10m from the surface of the installation site (if the site is a rooftop, then the height shall be 10m from the rooftop base).

Tier 1 stations must be installed at locations where trained personnel are readily available to operate the station properly; yet should also be installed in secure locations free of influence from local aerosols or urban effects.

Tier 1 stations shall be designed with a goal to achieve measurement uncertainties of 2% to 3% for one-minute values, and <2% for daily GHI and <1% for daily DNI values.

Tier 2

A Tier 2 station shall be used for those situations where data is required from a remote or extreme weather location, or where daily or regular maintenance is not possible, thus ruling out a Tier 1 station. A Tier 2 station must therefore consist of rugged, robust equipment that operates satisfactorily over extended time periods (a month or more) without on-site maintenance. The minimum requirement for a Tier 2 station is a Rotating Shadowband Radiometer (RSR) capable of measuring against all three components (GHI, DNI and Diffuse). A Tier 2 station shall include an ISO Secondary Standard pyranometer to allow for quality control and calibration of the RSR equipment, and shall also collect data on temperature, humidity, barometric pressure at 1-2m above

² In cases where it is necessary to install the station on a rooftop or other raised installation then these heights shall be from the base of the station.

ground level (agl), and wind speed measurements at a height of 10 m above ground level. A Tier 2 station shall be designed with a goal to provide measurement uncertainty of <5% for daily values.

ADDITIONAL EQUIPMENT

The following additional equipment shall be installed at all sites:

- Rain gauge;
- Corrosion test stand;
- Soiling measurement assembly;
- Surveillance camera;

Equipment Installation and Maintenance

The Service Provider shall ensure that:

- The solar irradiation measurement equipment, the station containing other weather sensors, as well as any on-site data logger equipment is easily accessible for cleaning, level checks, and maintenance.
- The equipment is adequately protected from storms/cyclones, wind, corrosion, rain, humidity, frost and dust to operate safely in the environment in which it is installed. The whole station must also be raised by at least 15 cm from the ground and protected against any animal intrusion by a light preventive fence (wire mesh type) and easy access for maintenance. Electrical devices and cubicles shall have IP 65 protection class. Dome heating shall be included in humid areas.
- The equipment is protected from lightning strikes and shielded from radio frequency interference. In general, a single point ground using a copper rod deep in the ground shall be installed. Twisted pair cables shall be used for low voltage measurements. The low voltage sensor cables shall be physically isolated from power cables (not run in parallel or in the same conduit). Masts and tripods for mounting meteorological equipment shall be well grounded to assure a path for lightning strikes. As an option, Metal Oxide varistors, or gas tubes, can be used to protect signal cables from electrical surges.
- All equipment, cables, fasteners, support, boxes, seals must be resistant to UV Rays and exceptional heat in the country.
- An anodized aluminum plate will be provided and fixed securely to each station and of minimum dimensions 20 cm x 10 cm indicating the WAPP's logo and the title of the project, the arrangement and the colors will be the subject to consultations with the Provider after the delivery of a sample.
- The equipment is sited to minimize conditions that might cause shading of the sensors, such as nearby trees, buildings, or other tall objects, including the meteorological mast and boom for the wind vane. The weather sensors shall be installed at a location that does not shade the solar sensors.
- All measurement equipment, including temperature, humidity, barometric pressure, and wind speed and direction, shall include factory calibrations. A copy of calibration certificates will be submitted to the Client before sending material.

- At the end of the first year of measurements, a field calibration using a reference pyranometer (referenced to the World Radiometric Reference established in Davos, Switzerland) shall be conducted at each solar measurement station for a period of no longer than one working day with the presence of WAPP’s representative.
- The station, including the data logging equipment, is powered adequately and continuously for proper year-round operation, with appropriate protection against power surges and frequency fluctuations.
- Data is collected at minimum 1-s sampling frequency, averaged over 1-minute time intervals.
- The data recovery rate from each of the sensors shall be >95% over the course of the measurement campaign. If this rate is not achieved, then measurements will be extended until this threshold is reached. Additionally, any single incident of data loss shall not exceed 15 days. Unless the loss of data can be attributed to a force majeure event, the Service Provider shall be required to collect an additional month of data for every data loss event in excess of 15 days.
- Arrangements are made for maintaining and servicing the solar and meteorological equipment throughout the measurement campaign. These arrangements shall include daily (Tier 1) or weekly (Tier 2) inspection and proper leveling and cleaning of the thermopile solar monitoring equipment, including checking the sensor levels, and a physical maintenance visit by a qualified technician at a minimum frequency of every six months. The time settings on all data loggers shall always be set to local standard time using GPS and shall be verified during inspections.
- Data download from each site shall be done at least daily and checked to ensure against data loss, corrupted data, calibration drift, and instrument failure. There must be adequate local data storage capacity for at least three months data collection.
- Arrangements are made to ensure that data from each sensor are transmitted electronically through a GSM connection (or satellite connection if GSM coverage is inadequate) to a secure data portal managed by the Service Provider to which the WAPP Secretariat and the WB shall be given online access. The Service Provider shall utilize data logging equipment that has two way-communications capabilities. There shall be a manual backup data collection procedure for each station, which can be activated within 24 hours in order to minimize data loss.
- All collected data and quality-assessed data shall be uploaded every month to the ESMAP data bank. Data transmission (from each measurement site, and to the data repository) is the responsibility of the Service Provider.
- A historical log report is maintained by a local representative of the Service Provider documenting all maintenance undertaken, date and reason for replacement of instruments, etc. The log report shall be provided to the WAPP, and the Service Provider shall update the historical log report within 15 days of a site visit.
- A suitable inventory of spare and wear parts and consumables is available for one year of operation (e.g. for instrument replacement), and that the spare parts inventory are available and can be delivered on short notice for each site.

Reporting

Site Installation Reports

The Service Provider shall prepare a Site Installation Report for each site, which shall include, but not be limited to:

- Exact location details, including coordinate system and station elevation info. There shall be GPS loggings at the location of the solar sensors to within an accuracy of 1-meter. All references shall be according to geographical North instead of Magnetic North;
- Configuration drawing of the station layout, including mounting height of the equipment above ground, its layout, and local obstructions;
- Layout of the wind mast showing alignment of the wind direction boom, the North arrow and expected main wind direction;

SITE MEASUREMENT REPORTS

Site Measurement Reports for each site are required outputs following each 12 months' measurement period.

Service Providers are required to:

- Review and quality check the measured solar data from the site using best practices quality assessment procedures that provide appropriate data flagging for all questionable or

missing data. Examples of best practices can be found at http://rredc.nrel.gov/solar/pubs/seri_qc/;

- Report on the calibration procedures and results of the pyranometers and pyrhemometers, including calibrations at the start of each 12-month study period. The report shall include the traceability of the calibration procedures to the World Radiometric Reference that is established in Davos, Switzerland every five years;
- Estimate the uncertainty in the prediction of the long-term GHI and DNI at each site;
- Analyze the seasonal and diurnal characteristics of the measured GHI and DNI;

If the Employer has delayed payments beyond fifteen (15) days after the due date stated in the SCC, interest shall be paid to the Service Provider for each day of delay at the rate stated in the SCC.

6.6 Price Adjustment

6.6.1 Prices shall be adjusted for fluctuations in the cost of inputs only if **provided for in the SCC**. If so provided, the amounts certified in each payment certificate, after deducting for Advance Payment, shall be adjusted by applying the respective price adjustment factor to the payment amounts due in each currency. A separate formula of the type indicated below applies to each Contract currency:

$$P_c = A_c + B_c \frac{L_{mc}}{L_{oc}} + C_c \frac{I_{mc}}{I_{oc}}$$

Where:

P_c is the adjustment factor for the portion of the Contract Price payable in a specific currency “c”.

A_c , B_c and C_c are coefficients specified in the SCC, representing: A_c the nonadjustable portion; B_c the adjustable portion relative to labor costs and C_c the adjustable portion for other inputs, of the Contract Price payable in that specific currency “c”; and

L_{mc} is the index prevailing at the first day of the month of the corresponding invoice date and L_{oc} is the index prevailing 28 days before Bid opening for labor; both in the specific currency “c”.

I_{mc} is the index prevailing at the first day of the month of the corresponding invoice date and I_{oc} is the index prevailing 28 days before Bid opening for other inputs payable; both in the specific currency “c”.

If a price adjustment factor is applied to payments made in a currency other than the currency of the source of the index for a particular indexed input, a correction factor Z_o/Z_n will be applied to the respective component factor of p_n for the formula of the relevant currency. Z_o is the number of units of currency of the

country of the index, equivalent to one unit of the currency payment on the date of the base index, and Z_n is the corresponding number of such currency units on the date of the current index.

6.6.2 If the value of the index is changed after it has been used in a calculation, the calculation shall be corrected and an adjustment made in the next payment certificate. The index value shall be deemed to take account of all changes in cost due to fluctuations in costs.

6.7 Dayworks

6.7.1 If applicable, the Daywork rates in the Service Provider's Bid shall be used for small additional amounts of Services only when the Employer has given written instructions in advance for additional services to be paid in that way.

6.7.2 All work to be paid for as Dayworks shall be recorded by the Service Provider on forms approved by the Employer. Each completed form shall be verified and signed by the Employer representative as indicated in Sub-Clause 1.6 within two days of the Services being performed.

The Employer may instruct the Service Provider to search for a Defect and to uncover and test any service that the Employer considers may have a Defect. Defect Liability Period is as **defined in the SCC**.

7.2 Correction of Defects, and Lack of Performance Penalty

- (a) The Employer shall give notice to the Service Provider of any Defects before the end of the Contract. The Defects liability period shall be extended for as long as Defects remain to be corrected.

8. Settlement of Disputes

8.1 Amicable Settlement

The Parties shall use their best efforts to settle amicably all disputes arising out of or in connection with this Contract or its interpretation.

8.2 Dispute Settlement

8.2.1 If any dispute arises between the Employer and the Service Provider in connection with, or arising out of, the Contract or the provision of the Services, whether during carrying out the Services or after their completion, the matter shall be referred to the Adjudicator within 14 days of the notification of disagreement of one party to the other.

8.2.2 The Adjudicator shall give a decision in writing within 28 days of receipt of a notification of a dispute.

8.2.3 The Adjudicator shall be paid by the hour at the rate **specified in the BDS and SCC**, together with reimbursable expenses of the types **specified in the SCC**, and the cost shall be divided equally between the Employer and the Service Provider, whatever decision is reached by the Adjudicator. Either party may refer a decision of the Adjudicator to an Arbitrator within 28 days of the Adjudicator’s written decision. If neither party refers the dispute to arbitration within the above 28 days, the Adjudicator’s decision will be final and binding.

8.2.4 The arbitration shall be conducted in accordance with the arbitration procedure published by the institution named and in the place **shown in the SCC**.

8.2.5 Should the Adjudicator resign or die, or should the Employer and the Service Provider agree that the Adjudicator is not functioning in accordance with the provisions of the Contract, a new Adjudicator will be jointly appointed by the Employer and the Service Provider. In case of disagreement between the Employer and the Service Provider, within 30 days, the Adjudicator shall be designated by the Appointing Authority **designated in the SCC** at the request of either party, within 14 days of receipt of such request.

Performance Incentive Compensation Appendix Provisions

ARTICLE 1- GENERAL

1.1 Documents Comprising the Performance Incentive Compensation Appendix

The Performance Incentive Compensation Appendix consists of:

- (a) the Performance Incentive Compensation Appendix Provisions;
- (b) Attachment #1 Incentive Compensation Calculation Procedure Notes; and
- (c) Attachment #2 Incentive Compensation Charts 1-[].

ARTICLE 2- THE PERFORMANCE INCENTIVE COMPENSATION

2.1 Performance Incentive Compensation Limits

(1) The Performance Incentive Compensation paid to the Service Provider shall not exceed the equivalent of \$[] U.S. over the term of the Contract.

(2) The actual amount paid to the service Provider as Performance Incentive Compensation shall be determined by the extent to which the Service Provider achieves the performance criteria set out in the Incentive Compensation Charts and by the application of the calculations set out in the Incentive Calculation Procedure Notes for the applicable Contract Year.

(3) If the Service Provider fails to meet the “Excellent” rating set out in the Incentive Compensation Chart, in any Contract Year, the Service Provider will be obliged to make up the shortfall in the subsequent Contract Year, as well as meet the performance targets for that Contract Year.

(4) Except as the Employer may, in its sole discretion, otherwise determine based on

exceptional circumstances, if the Service Provider fails to attain the Maximum Annual Incentive Compensation in any Contract Year, the shortfall will not be available to the Service Provider in the subsequent Contract Years and the equivalent of \$[] U.S. per Contract Year maximum will not be increased.

(5) For the purpose of calculating the equivalency of \$[] U.S. and \$[] U.S. pursuant to Sections 2.1(1) and 2.1(2) of this Performance Incentive Compensation Appendix, the equivalency shall be calculated as of the date of payment of the Performance Incentive Compensation.

**ATTACHMENT # 1 – APPENDIX G
INCENTIVE COMPENSATION CALCULATION PROCEDURE NOTES**

[SAMPLE: This part is to be designed on a case by case approach]

**PART A THE METHOD FOR CALCULATING PERFORMANCE INCENTIVE
COMPENSATION IN EACH CONTRACT YEAR**

I. The Performance Incentive Compensation for each Contract Year shall be calculated as follows:

$$\text{Compensation} = \text{Composite Score} \times 0.2 \times \text{Maximum Annual Incentive Compensation}$$

Where:

- (i) The Maximum Annual Incentive Compensation is calculated as set out in Section 2.1 of the Performance Incentive Compensation Appendix Provisions; and
- (ii) The Composite Score is calculated in accordance with “Part B-The Method for Calculating the Composite Score” of these Incentive Compensation Calculation Procedure Notes.

PART B THE METHOD FOR CALCULATING THE COMPOSITE SCORE

1. The Composite Score for each Contract Year shall be as follows:

Composite Score Total of All Weighted Scores for the Performance Criteria

Where:

- (i) The Weighted Score for each Performance Criterion equals Criterion Weight x Criterion Value;
- (ii) The Criterion Value is measured from “Excellent” to “Poor” with corresponding values of 5 (for “Excellent” performance) to 1 (for “Poor” performance) as set out in the Incentive Compensation Charts and evaluated based on the performance of the Service Provider;
- (iii) The Criterion Value which the Operator receives for any Performance Criterion is based upon the technical standards set out in the Incentive Compensation Charts under the headings, “Excellent”, “Very Good”, “Good”, “Fair”, and “Poor” as compared against the Operator’s actual technical standards in each Contract Year; and
- (iv) If the Service Provider’s actual performance in a Contract Year,
 - (a) exceeds the technical standards for an “Excellent” Criterion Value, then the Criterion Value shall be 5;
 - (b) is less than the technical standards for a “Poor” Criterion Value, then the Criterion Value shall be zero; or
 - (c) is in between the technical standards for two Criterion Values, then the Criterion

Value shall be rounded down to the nearest whole number or 0.5 decimal point.

2. For the purpose of clarity, it is noted that there are only ten Criterion Values to be used as follows: 0, 1, 1.5, 2, 2.5, 3, 3.5, 4, 4.5 and 5.
3. Notwithstanding paragraphs 1 and 2 above, with respect to the Performance Criterion relating to institutional improvements in Attachment #2 The Incentive Compensation Charts 1-8,
 - (a) if the Service Provider’s actual performance in a Contract Year is less than the technical standard for a “Fair” Criterion Value, then the Criterion Value shall be zero;
 - (b) for the purpose of clarity, it is noted that there are only three Criterion Values to be used as follows: 0, 2 and 5; and
 - (c) each of the documents or plans listed under the Performance Criterion shall be scored with the appropriate Criterion Value and a mean average score will be taken to calculate the Criterion Value for the Performance Criterion, which shall be rounded down to the nearest whole point or 0.5 decimal point.
4. For ease of reference, the following calculation represents the calculation of the Composite Score for a hypothetical Service Provider for four performance criteria in one Contract Year.

Sample Incentive Compensation Chart

Performance Criterion		Units	Criterion Values				
			Weight				
			Excellent	Very Good	Good	Fair	Poor
1.	e.g. Electricity use [% reduction in kW. hr consumed from Base Year]	0.30	65	55	50	40	30
2.	[Criterion 2] []	0.25	20	19	17	16	15
3.	[Criterion 3] []	0.15	30	25	20	15	10
4.	[Criterion ~] []	0.30	90	85	80	75	70

The following table demonstrates the procedure for the calculation of the “**Composite Score**”, if at the end of the year the achievements of the Service Provider are as follows:

1.	[e.g. Electricity use]	57
2.	[Criterion 2]	22
3.	[Criterion 3]	29
4.	[Criterion 4]	69
